Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1890 Excerpt: .can often be more simply performed by boiling the solution of the cyanide in a porcelain dish with Am_2S ; which must be added until the yellow colour remains after the liquid has been boiled for a short time. If a dark-coloured precipitate forms, this must be allowed to settle or be filtered off, before the colour of the filtrate can be seen. The liquid is then filtered if necessary, and acidified with HCl in the porcelain dish. On adding Fe_2Cl_6 in small quantity, a blood red colour will be produced, which is not removed by heat or by the addition of a little dilute HCl . The colour is at once destroyed, however, when a few drops of the liquid are added to some HgCl_2 solution. Methods (304, 305, 306) are exceedingly delicate tests for a cyanide: (305) and (306), if less readily performed than (304), exceed it in delicacy. Method (306) is the more easy of the two to perform, and (305) is only used in cases where, after boiling with excess of Am_2S , the filtrate is dark coloured and therefore the red coloration would be invisible. HgCy_2 does not show the reactions for a cyanide by methods (303, 304, 305); but by boiling with Am_2S according to method (306), AmCyS is obtained in the filtrate from the black HgS precipitate, and will give the red coloration with Fe_2Cl_6 . Solid HgCy_2 when heated in a small tube closed at one end also gives off cyanogen gas,...
