This eect is demon-strated in Figure 3, where contours of maximum computed amplitudes are presented for two sources A and G. The amplitude of the o-shore propa-gating tsunami is larger in the direction perpendicular to the trench ( and the tsunamigenic fault ). The farther away the site is from this main beam, the smaller the amplitudes of the waves are, even if the site is fairly close to the source. Amplitudes of the rst waves at Gage 1, the nearest to Hawaii, are very similar for almost all the sources. The only exception is source G, which generated...
